Zadanie 1

Na podstawie danej struktury danych:

Należało napisać procedurę zwracającą informację o należnych odsetkach związanych z nieterminowymi wpłatami (dla danej należności identyfikowanej przez id należności).

Rozwiązanie:

1. Kod tworzący tabele:

```
CREATE TABLE stawki (
    dzien DATE NOT NULL,
    stawka DECIMAL NULL,
    PRIMARY KEY(dzien)
);

CREATE TABLE naleznosci (
    id INTEGER NOT NULL,
    kwota DECIMAL NULL,
    termin DATE NULL,
    PRIMARY KEY(id)
)

CREATE TABLE wpłaty (
    id INTEGER NOT NULL,
    naleznosci_id INTEGER NOT NULL,
    kwota DECIMAL NULL,
    data_wplaty DATE NULL,
    PRIMARY KEY(id),
    FOREIGN KEY(naleznosci_id)
    REFERENCES naleznosci(id)
)
```

Opis generatora:

W tworzeniu skryptu wypełniającymi przykładowymi danymi, posłużyliśmy się językiem Python. Kod generatora:

Plik main.py („korzeń”):

```
from Cleaning import Storage
from stawki import wypelnijStawki
from naleznosci import wypelnijNaleznosci

store.w.write("use bielas_a\n"
             "delete from wpłaty\n"
             "delete from naleznosci\n"
             "delete from stawki\n\n")
wypelnijStawki(store)
wypelnijNaleznosci(store)
```

Plik Cleaning.py zawierający pomocniczą strukturę danych - klasę storage:

```
class Storage:

        self.w = open("Workfile.sql", "w")
        self.wplatyId = 0
        self.debt_per_month = 3
        self.year_amount = 10
        self.debtAmount = self.debt_per_month * 12 * self.year_amount
```

Plik stawki.py (Nazwy tego i kolejnych plików sugerują, które tabele zostały wypełnione przy ich użyciu):

```

Ostatni przypadek jest najciekawszy, gdyż pokazuje, jak procedura radzi sobie z należnościami, które były spłacane tak długo, że w międzyczasie doszło do ustawowej zmiany stawek.

W implementacji wykorzystaliśmy plik wypełniony stawkami, które obowiązywały w Polsce począwszy od sierpnia 1992 roku.

Plik stawki.txt:

```
1992-08-15 60
1993-05-01 54
1995-12-15 46
1997-01-01 35
1998-04-15 33
1999-02-01 24
1999-05-15 21
2000-11-01 30
2001-12-15 20
2002-07-25 16
2003-02-01 13
2003-09-25 12.25
2005-01-10 13.5
2005-10-15 11.5
2008-12-15 13
2014-12-23 8
```

Każdy wiersz opisuje odpowiednio: po prawej stronie po spacji stawka roczna wyrażona w procentach, po lewej zaś datę, od której dana stawka obowiązywała.

Pomocnicze polecenia sql:

Polecenie, które pokazuje id zaległych należności, i zestawia je z terminem spłaty oraz daty ostatniej dokonanej płatności:

```
select n.id,termin, max(data_wplaty)
from naleznosci as n join wpłaty as w
on w.naleznosci_id = n.id
group by n.id,termin
having max(termin) < max(data_wplaty)
```

Polecenie pokazujące wszystkie informacje o należnościach, których spłata przekroczyła termin (w podzapytaniu zostało wykorzystane wyżej opisane zapytanie sql):

```
select *
from naleznosci as n join wpłaty as w
on w.naleznosci_id = n.id
where n.id in
    (select n.id
     from naleznosci as n join wpłaty as w
     on w.naleznosci_id = n.id
     group by n.id,termin
     having max(termin) < max(data_wplaty) )
```

Polecenie pokazujące jedynie id należności, których spłata przekroczyła termin:

```
select n.id
from naleznosci as n join wpłaty as w
on w.naleznosci_id = n.id
group by n.id,termin
having max(termin) < max(data_wplaty)
```

Pomocnicze procedury:

Procedura zwracająca minimum z dwóch dat podanych na wejściu:

```
create function minimum_date(@val1 date, @val2 date)
returns date
as
begin
    if @val1 < @val2
        return @val1
    return isnull(@val2,@val1)
end
go
```

Kod i wywołanie procedury zwracającej id „specjalnej” należności. Id tej należności wykorzystaliśmy, żeby przeprowadzić test numer trzy opisany wyżej.

```
create procedure getSpecial @special int output
as
set @special =
    (select n.id
     from naleznosci as n join wpłaty as w
     on w.naleznosci_id = n.id
     group by n.id,termin
     having year(max(data_wplaty)) - year(max(termin)) > 1)
go

declare @special int
execute getSpecial @special output
select 'special id: ', @special
```

W przypadku poniższego wypełnienia, zwracane id będzie miało wartość 219.

Skrypt wypełniający tabele przykładowymi danymi:

```
delete from wpłaty
delete from należnosci
delete from stawki
